PDF to All Converter is a program with a pretty self-explanatory title - it allows you to transform PDF documents into files of several formats, including JPG, DOC, RTF, TXT and HTML. It can be easily used by individuals of any experience level. The interface of the software is clean and pretty intuitive. Documents can be imported into the list by using either the file browser, treeview or "drag and drop" method. Batch processing is allowed. In the queue you can check out the name, source path, size, type and date of modification for each file. So, once you establish the output directory and file type, you can proceed with the conversion task. Furthermore, you can configure settings for each output profile when it comes to the image or page size, watermarks, merging and others, as well as move items up and down the list, remove an item from the queue or clear the entire thing. The PDF processing tool requires a pretty high amount of system resources, has a good response time, quickly finishes a task and didn't freeze, crash or pop up errors during our testing. On the other hand, there is no help file available and you need to separately install third-party applications if you want to convert PDFs to any file type (except images). We recommend you look for something more advanced than this tool.
