What's New in the?

Wrox SWF to Image is a much needed library that provides you with the means to convert SWF files to BMP, JPG and GIF formats. It's an ActiveX library that converts from Visual Basic.NET, Visual basic, ASP.NET, ASP, Visual C++ and Visual C#. A SWF file is destined for multimedia content through the use of vector graphics and ActionScript. The library at hand allows you to implement the code to multiple applications and extract the frames from the SWF clips which you can then use anyway you want. The library provides you with a large number of examples that you can use to fully understand it's capabilities, as well as limitations. You can use the examples to see how you can convert single or multiple files that are located in a folder. SWF To Image also gives you a chance to view how it handles a batch conversion of frames to JPEG format. SWF To Image offers you multiple methods in which you can perform the conversion for both single files as well as in batch. The library also enables you to set and modify the properties of the exported images. With SWF To Image you can set the image width, height, intex the frame and set the background color. Implementing this library you can also check to see of the Flash plugin is installed on the computer. You can also have the library count the number of frames in the movie, as well as provide you with information about how the it is scaled. Amongst the values you have ShowAll, NoBorder, ExactFit, AutoLow, AutoHigh, Best, AutoMedium and Medium. For programmers and developers that are looking for a reliable component to help them convert SWF clips into BMP, JPG and GIF images, SWF To Image is by all means a libraty to be taken into consideration. Description: Designing and developing web sites are easy with DHTML. This book has many examples of DHTML with the latest version of HTML and the DHTML object models. Description: The DHTML series by Paul Graham, this is the only book about DHTML that is written in the second person. Paul starts by talking about his motivations for writing it and then goes on to explain the state of web development today and how DHTML can help. He also goes through the basics of web development and the use of DHTML to build web sites. Description: DHTML stands for "Dynamically HTML" and is the dynamic part of web pages that can be changed at any time by the user. A simple example of this is a website where you can get prices for stuff, dynamically change them and get to see a list of products and prices for them. This book will teach you how to make dynamic web pages with CSS, the HTML object model and DHTML and will show you how to work with
