2. **Adobe Lightroom.** Adobe's Lightroom is a digital asset management and editing program that is designed for the Macintosh and Windows computers. It is used to organize, manage, and manipulate digital photos. Like Adobe Photoshop, Lightroom offers the layer system, but with a different feel to the way it works. In Lightroom, the photographs are displayed as thumbnails on the canvas (covering the workspace), and as you click them, a sequence of panels beneath the thumbnail window opens to display the picture and allow you to manipulate it. When an edit is complete, you click a little logo in the upper-right corner of the photo, which takes you to the Lightroom database, where the file is filed. The image that you are working on is called the **Library.** You can create multiple libraries, such as one for each holiday that you take photos for and one for all your favorite pictures. You can even create different libraries for different types of photos (for example, family photos versus travel photos) or for different photo purposes (for example, family portraits versus action shots). When working on a photo in the Library, you can select the photo to open it in Photoshop or

Lightroom (whichever you choose), and as you work on it, you can hide the photo again if you want to come back to it. You can even have multiple Photoshop windows open at one time, while working on an image, and then switch among them as you need to. Adobe Lightroom has a large following of professional photographers and film makers. As such, it offers professional-grade tools for the professional photographer, but is also easy to use and has a fine-tuned learning curve. You can use Lightroom to edit images that you have taken on a DSLR or your digital camera; you can import and process film-based negatives; you can perform a variety of white balance, exposure, color, contrast, and sharpness adjustments; you can combine several photos together to create a panorama or HDR image; and you can more generally accomplish a wide variety of functions. Adobe Lightroom is used by professional photographers, prosumer photographers, and professional shooters. It is available for the Macintosh and Windows computers. 3. **Image Adobe bridge.** Adobe's Image Adobe bridge is a browser that can be used for finding, organizing, editing, and sharing digital photos. The bridge is located in the Adobe Creative Cloud

The U.S. is set to breach the terms of its agreement with Russia and send more than 120,000 Russian troops back home to barracks, as the Trump administration pushes forward with another month of sanctions over the invasion of Ukraine. Vladimir Frolov, the deputy chief of staff of the Russian Ministry of Defense, tweeted Friday that the Russian forces who are already in Crimea are "laying down arms and receiving their orders to return home." The return of Russian forces, who invaded the peninsula in February, sends a powerful message of defiance to the international community, which has been mounting pressure on Moscow to comply with a peace accord. The agreement was signed at Minsk by Russian President Vladimir Putin and U.S. President Donald Trump, who has been escalating the tariff war between Washington and Russia. Meanwhile, Trump has continued to urge Russian President Vladimir Putin not to invade Ukraine. Trump said Thursday at the summit he told Putin, "You know, and I think you understand, this was an attack on Russia." "I do think you understand that," Trump said. "What they did was not good." A spokesman for the Russian Foreign Ministry slammed the anti-Russian rhetoric coming from the White House. Russian Foreign Ministry spokesman Sergei Ryabkov called Trump's comments about sending American troops into Europe "fantasy" and said Washington has no intention to do so. "This is not about Russia. This is about a military-political game," Ryabkov said. In remarks on Russian television Thursday, Frolov echoed his Friday tweet and said that the troops in Crimea are already receiving instructions to return to their barracks. "These units have already received their orders for return (to barracks) and no further issues there," Frolov said. Frolov's remarks came just weeks before the deadline for all Russian troops stationed in Ukraine to be withdrawn by May 23. Several hundred troops from the Russian 53rd Army remain in Crimea, according to a Pentagon spokesman, and it was not immediately clear whether their return would be completed by the May deadline. Russian Lt. Col. Alexander Zhuchko, a spokesman for the 53rd Army, did not immediately respond to an e-mail seeking comment. The spokesman for the Russian Defense Ministry in Crimea did not respond to a request for comment Friday. Frolov's remarks appear to contradict a Russia defense ministry spokesman who said on April 7 that

," Zellweger said. "He also has a passion for pushing the boundaries in a field that is still trying to figure out what it is." Breathless It's no secret that some big-time gamers have a secret passion for photography. Wajira Paris, for example, is a 24-year-old assistant professor at the Art Institute of Boston College. Paris' past work includes

exploring ways to transform the figure into art using computers, as well as creating moving images in the architectural space. Wajira Paris (Khawar Sohail) "I'm interested in how the digital realm of technology and the architectural realm of design can work together," Paris said. "I'm more drawn to action and gesture or something that is fairly visual and visceral. That's the domain that I really inhabit." She also is a regular at sci-fi and fantasy conventions in New England. Paris' images captured in the real world are even more striking because of her experience from games. "There's something about exploring these worlds that takes away something of the fear, maybe, of not knowing what to expect," she said. Hobbs is the owner of Mount Holyoke's photography lab, and he's currently gearing up for the release of his latest project, "Game of Life." The goal of the new book, published by Ohio State University Press, is to explore how both biology and computers have been intertwined for decades to produce new life-forms. He's curious how this process plays out with the brains of gamers, which can respond to seemingly high-tech games in the same way that they respond to images on the Internet, or scientific discoveries in books. K. Tobin Harvey (K. Tobin Harvey) But Hobbs' biggest concern is that the experience of being immersed in the simulation itself is lost. "At the root, when you are playing these games, you are having all these experiential encounters and all these time-outs -- you are experiencing time," Hobbs said. "The mind moves so fast in these games that they just don't have the kind of visceral response you have to something like a book. It's not as rich. You can't make an aesthetic judgment on what you are seeing." As the case with Paris, Hobbs said his long fascination with games is rooted in his curiosity about how the human mind responds
